

Jose Miguel Torres

Full Stack developer

Full Stack Developer with a solid background spanning 2 years of professional experience. During my initial year, I honed my skills while working as a freelance developer, subsequently, I have gained valuable expertise in a wide range of areas, including Frontend and Backend development, Database management, and E-commerce solutions.

Experience

Lobo Creaciones | September 01, 2022 - Present

I commenced my journey at Lobo Creaciones as a Frontend Developer, primarily focusing on HTML, CSS, LIQUID, and Javascript. Over time, I expanded my skills to become a Fullstack Developer, proficient in Node.js, Express, Shopify REST API, and SQL. This transition was prompted by the evolving demands of our clients, necessitating a broader set of technical capabilities.

While at Lobo Creaciones, I earned a promotion in recognition of my commitment to continuous improvement. I not only enhanced my technique to better serve our clients. This included recommending strategies for optimizing the utilization of the store's data and designing sections aimed at enhancing the overall shopping experience for customers.

While my primary responsibility revolves around development tasks, I am also actively engaged in meetings to assess new project requirements.

Freelancing | June 20, 2021 - September 01, 2023

During my freelance period:

- Riderzone.cl: I provided frontend support for this e-commerce platform, enhancing visual appeal.
- Wit.LA: I embarked on a role as a trainee developer, specializing in connecting Vue.js applications with the company's API.
- Hosteria Cavancha: I developed a storage application for Hosteria Cavancha, a local hotel in Iquique, Chile, using Vue.js and Firebase
